## CREATE IMAGE

Task	Steps	Screen Shot	Comments
------	-------	-------------	----------

<b>1.Create new document</b>	Click new document with default template		<p>a. The image diagram should be created within the square border.</p>
<b>2.Set Document Properties</b>	Click File Select Document Properties Click + 'Resize page to content.....' Set Width 128 Height 166		<p>This will reset the image size that will be displayed in the document.</p>
<b>3.Zoom to fit the page in Window</b>	Click icon to increase document size to create diagram		<p>Image page will increase</p>

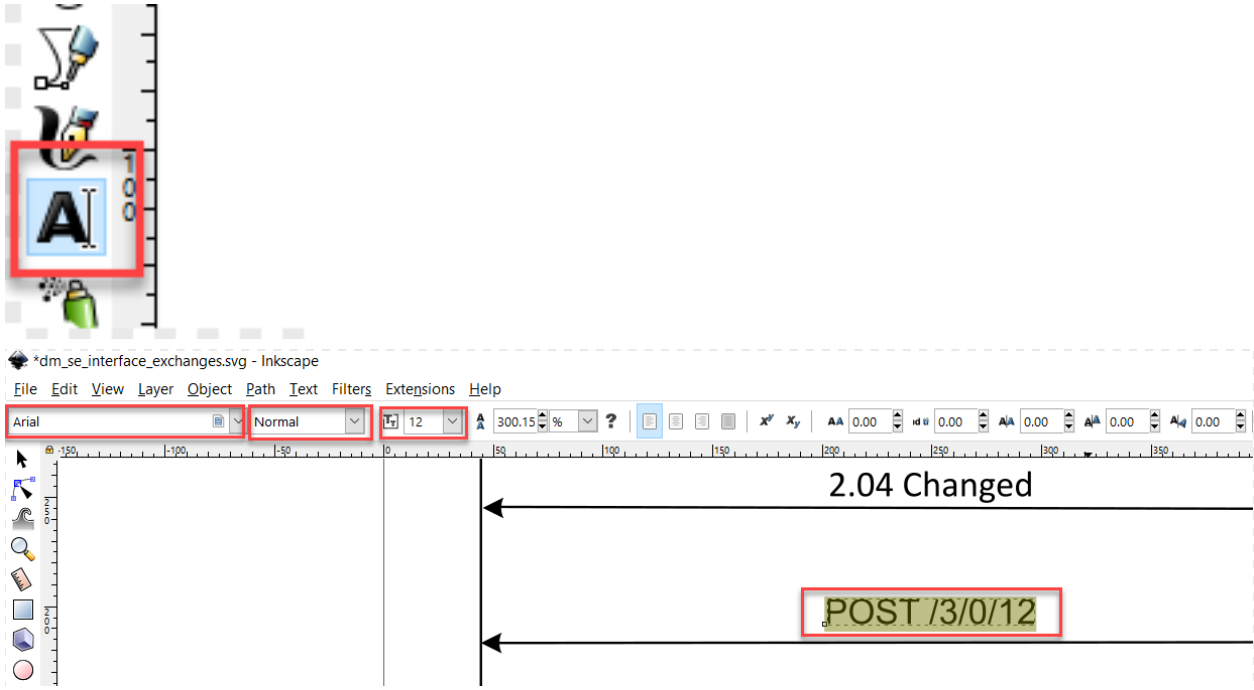

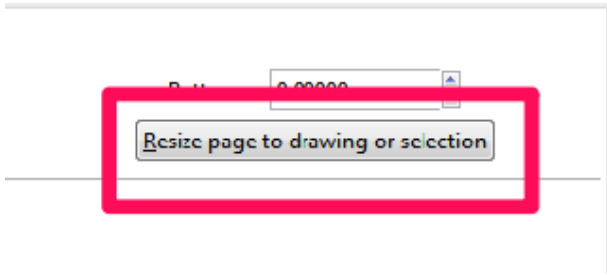

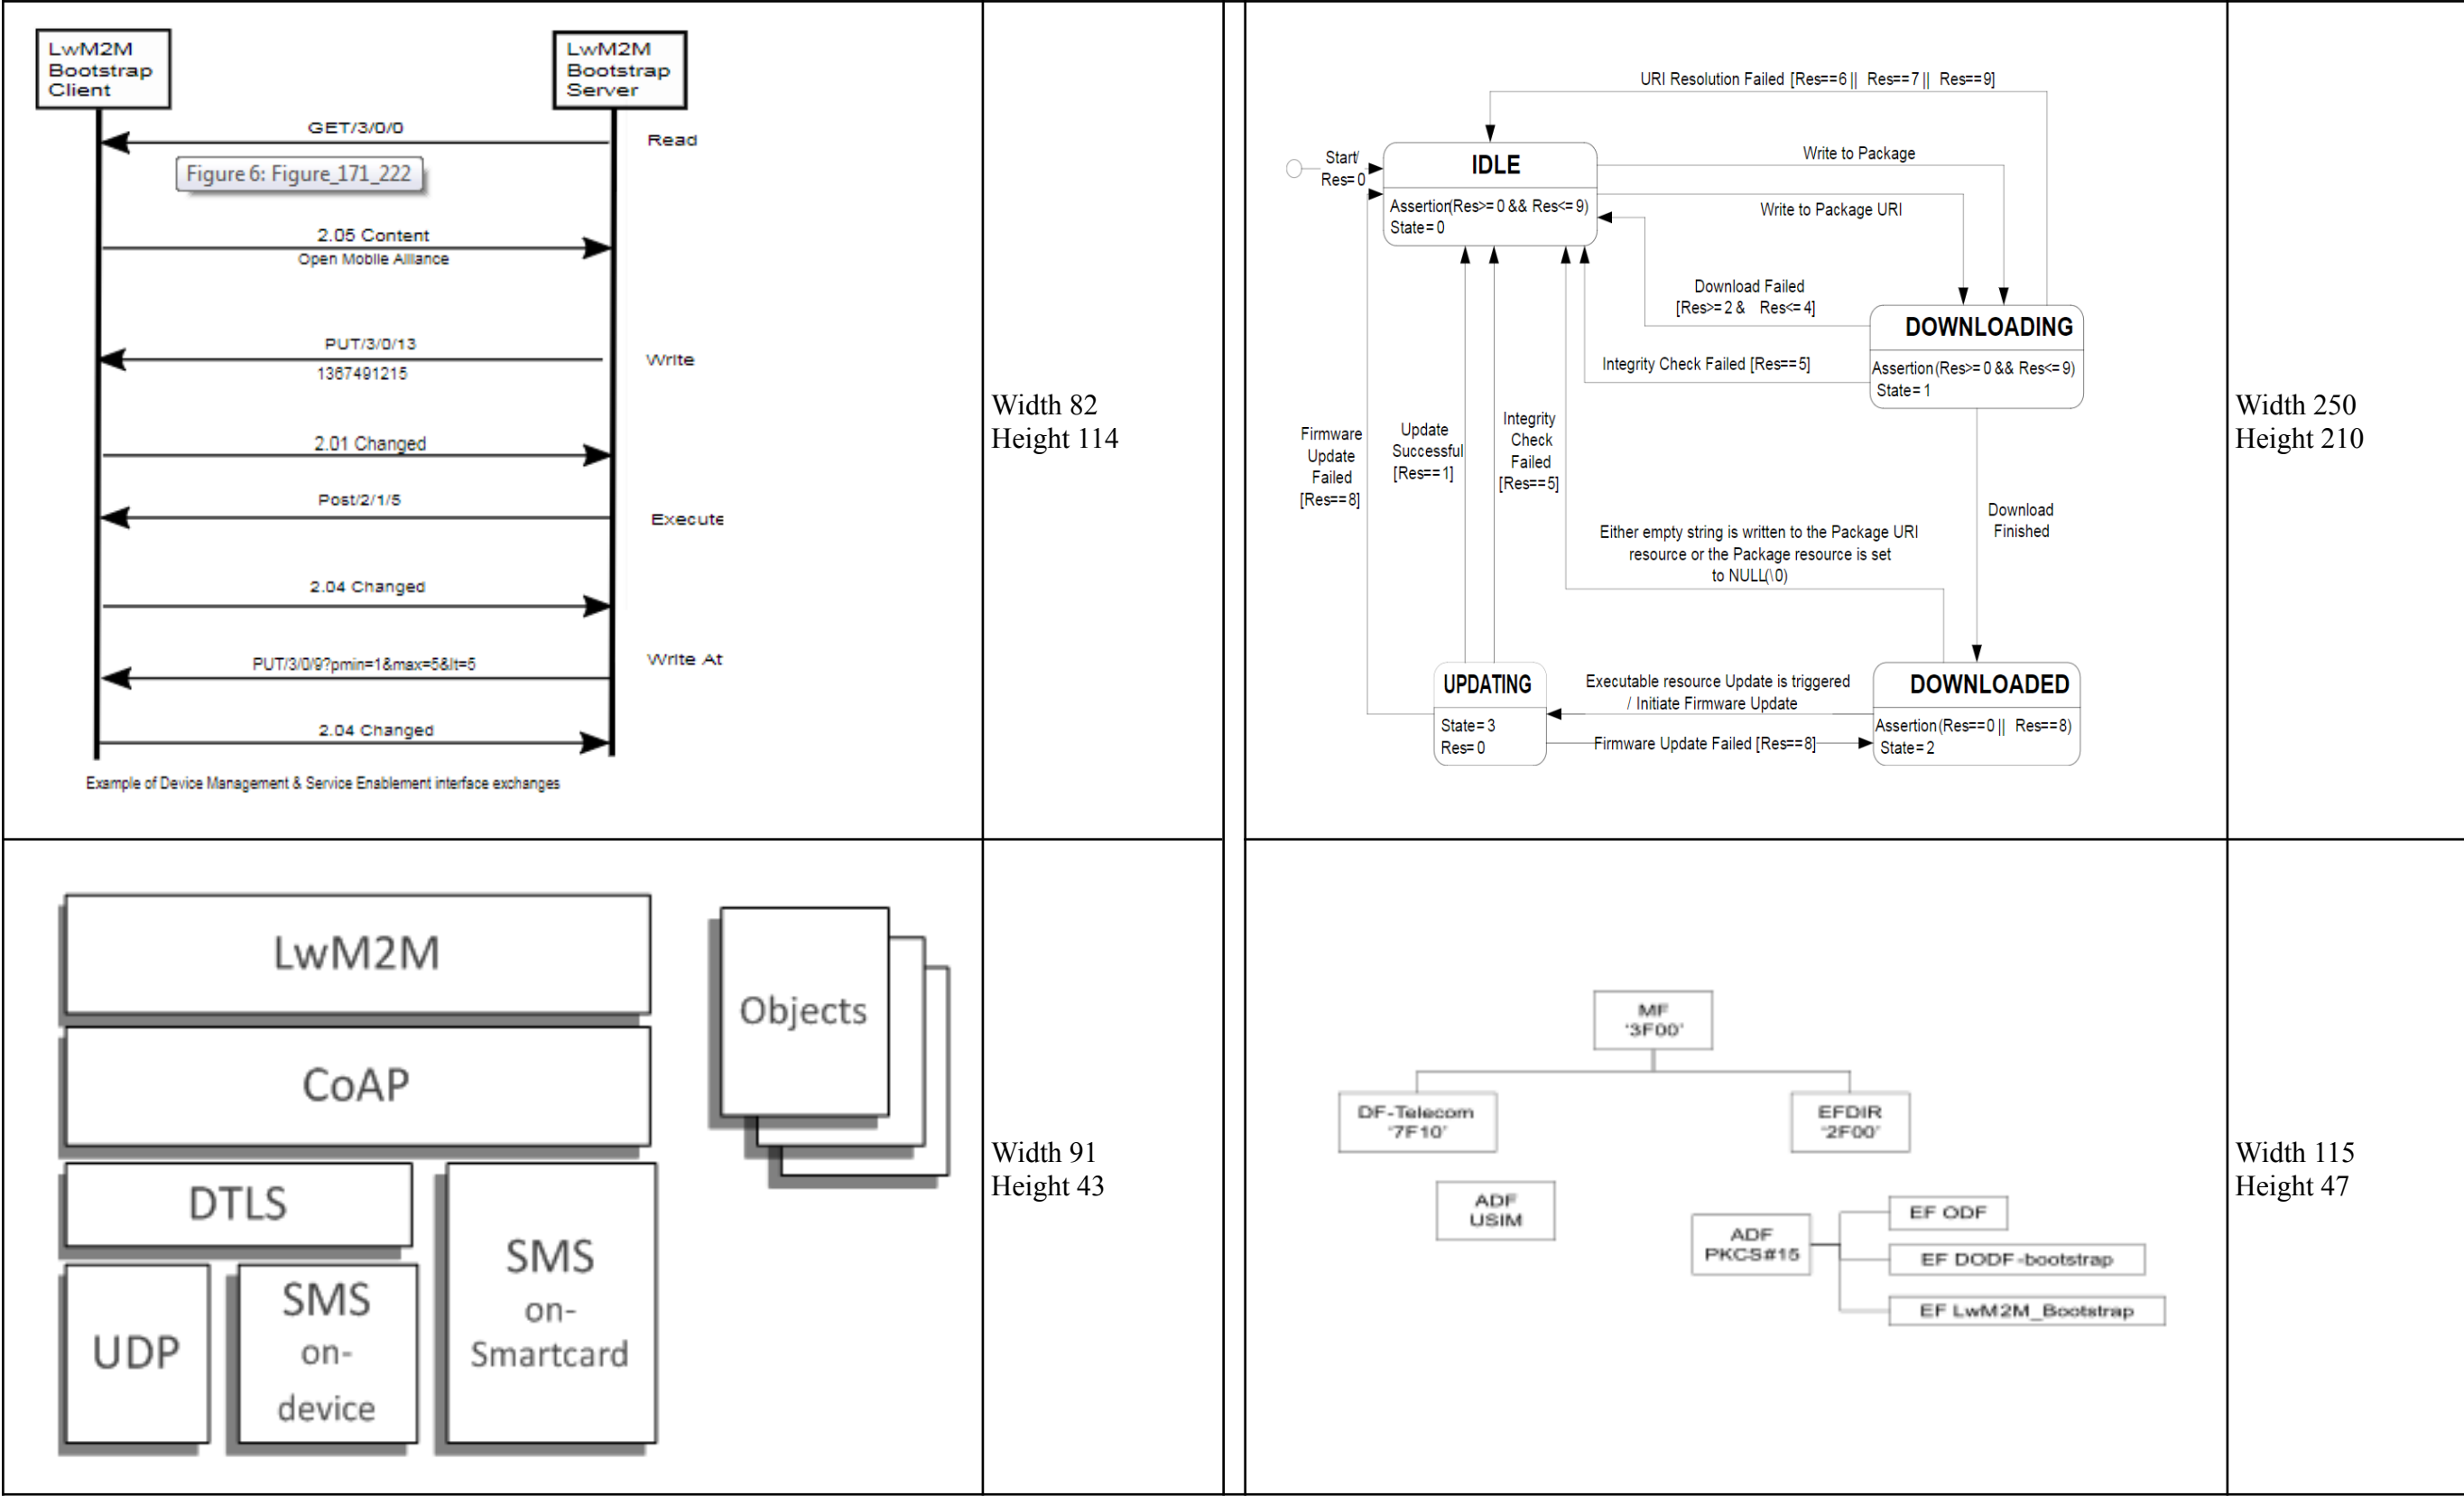

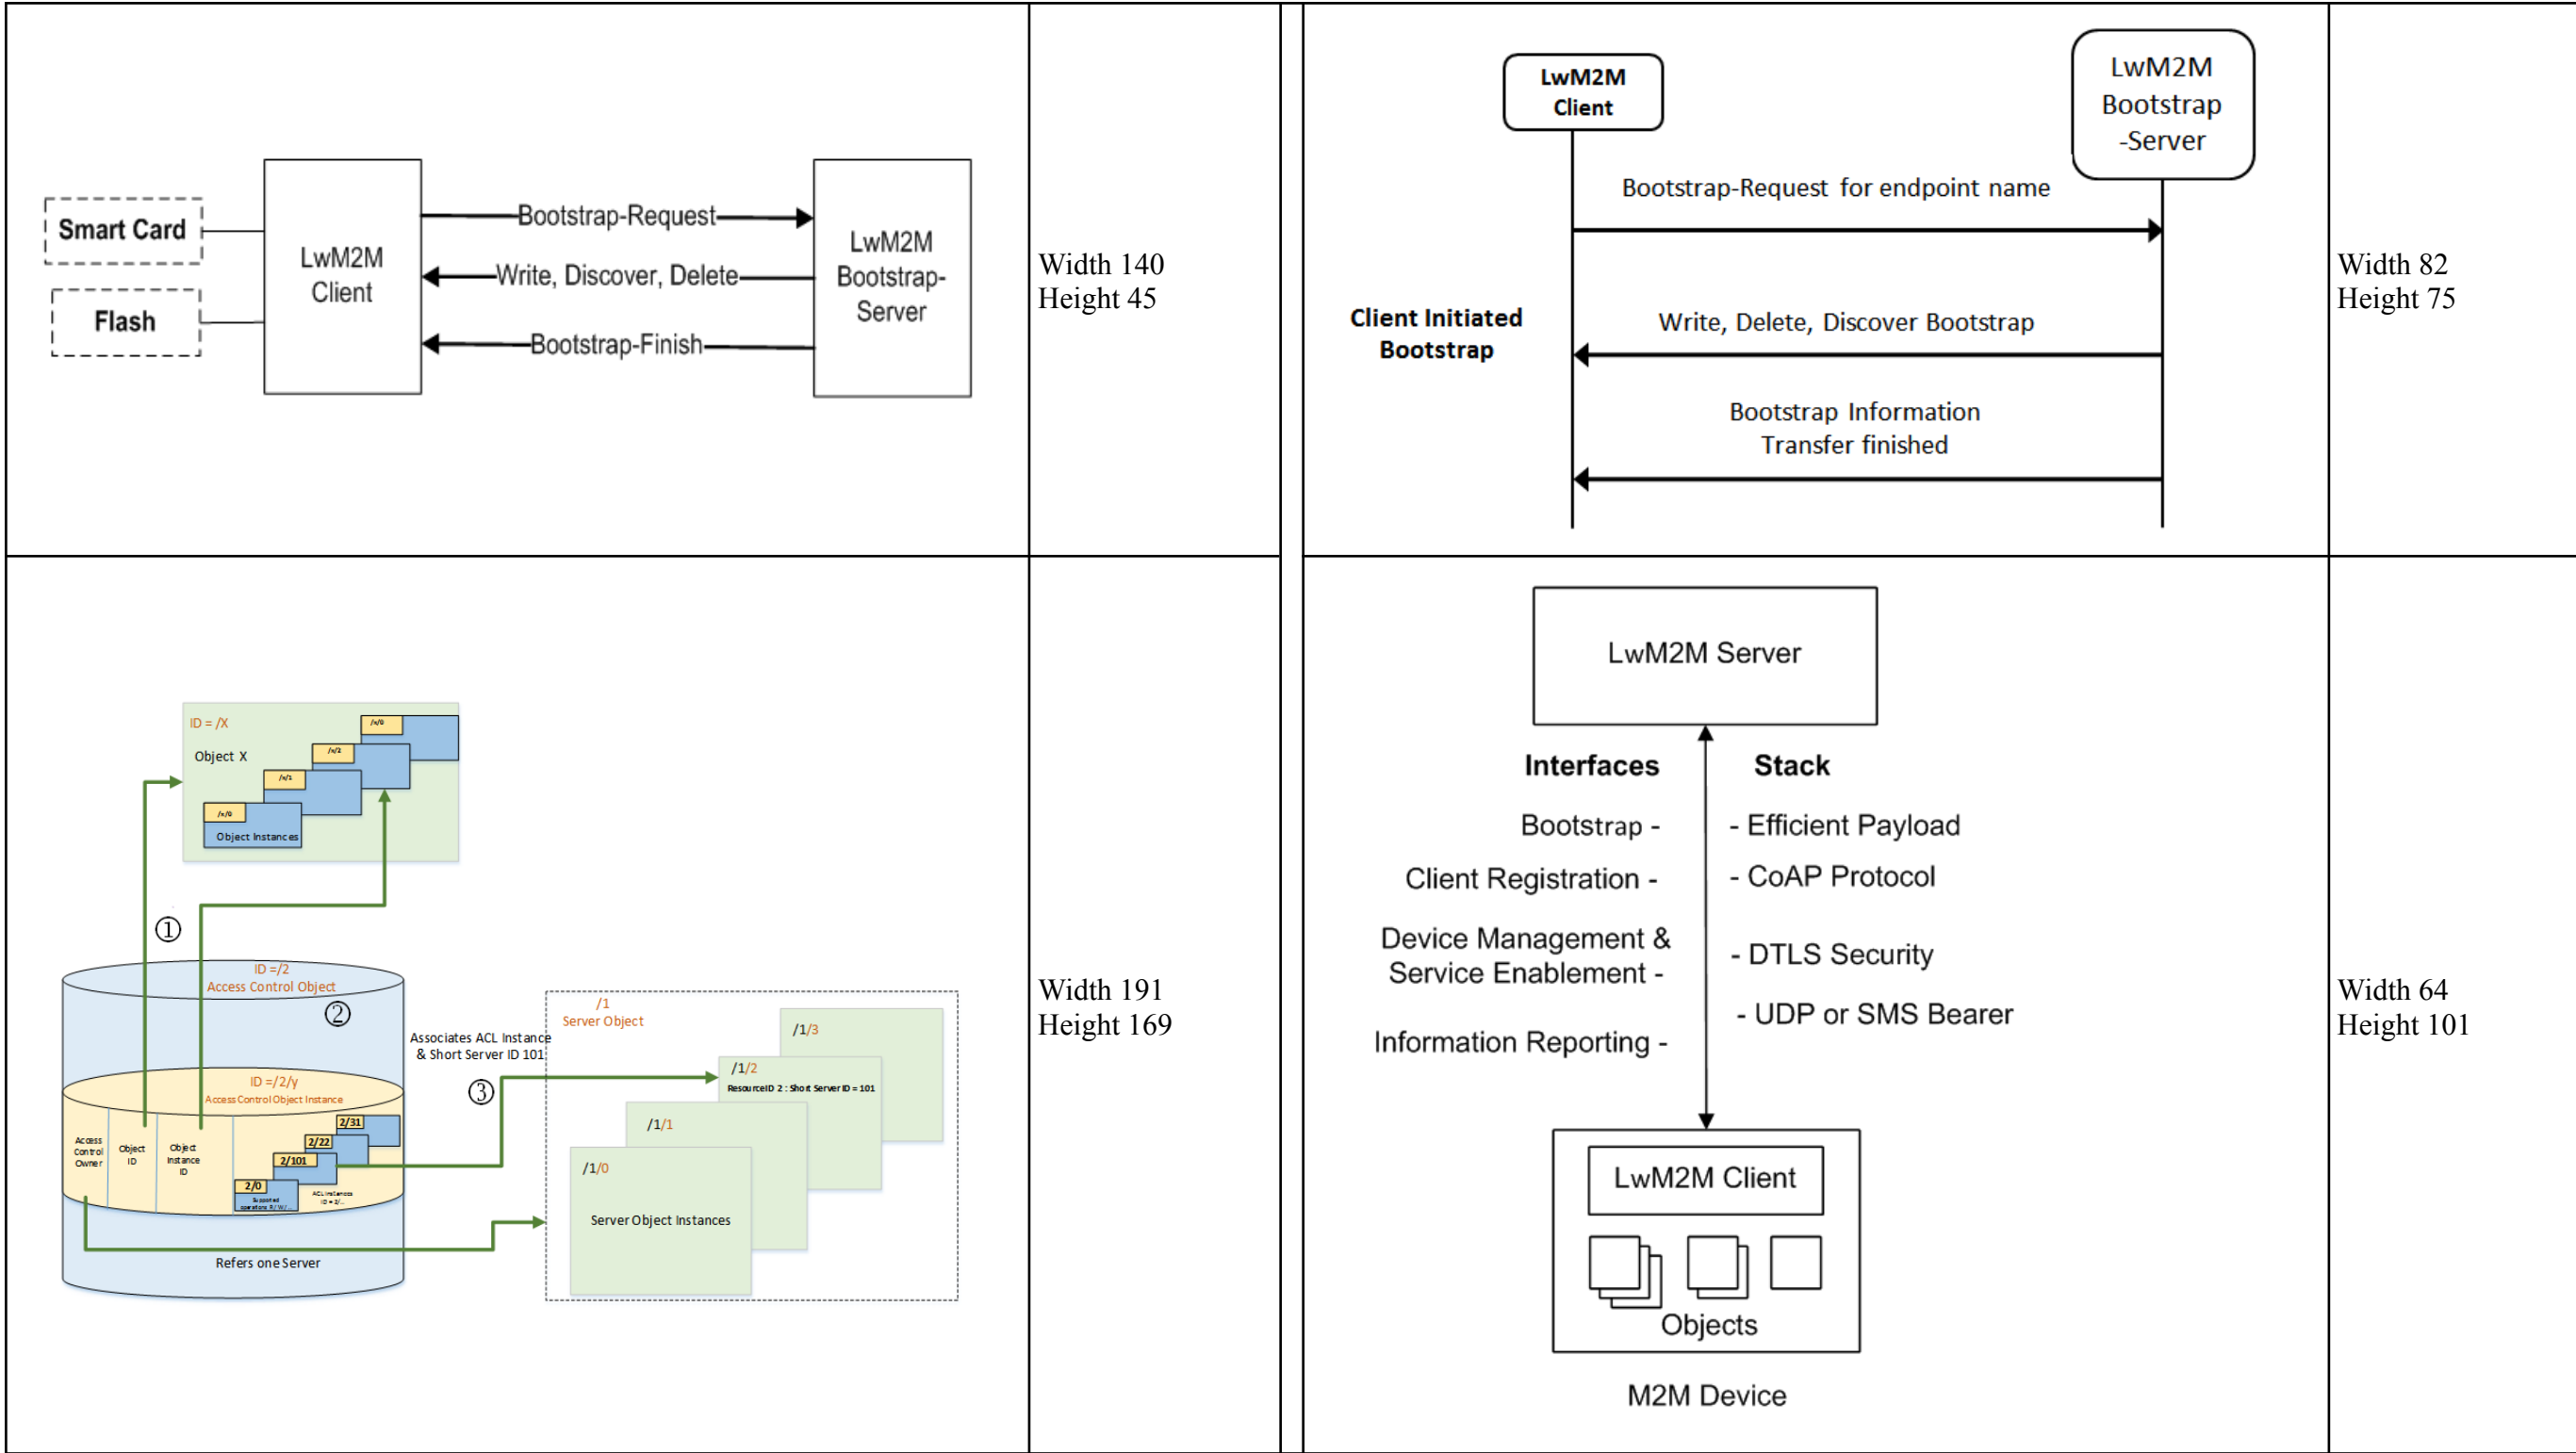

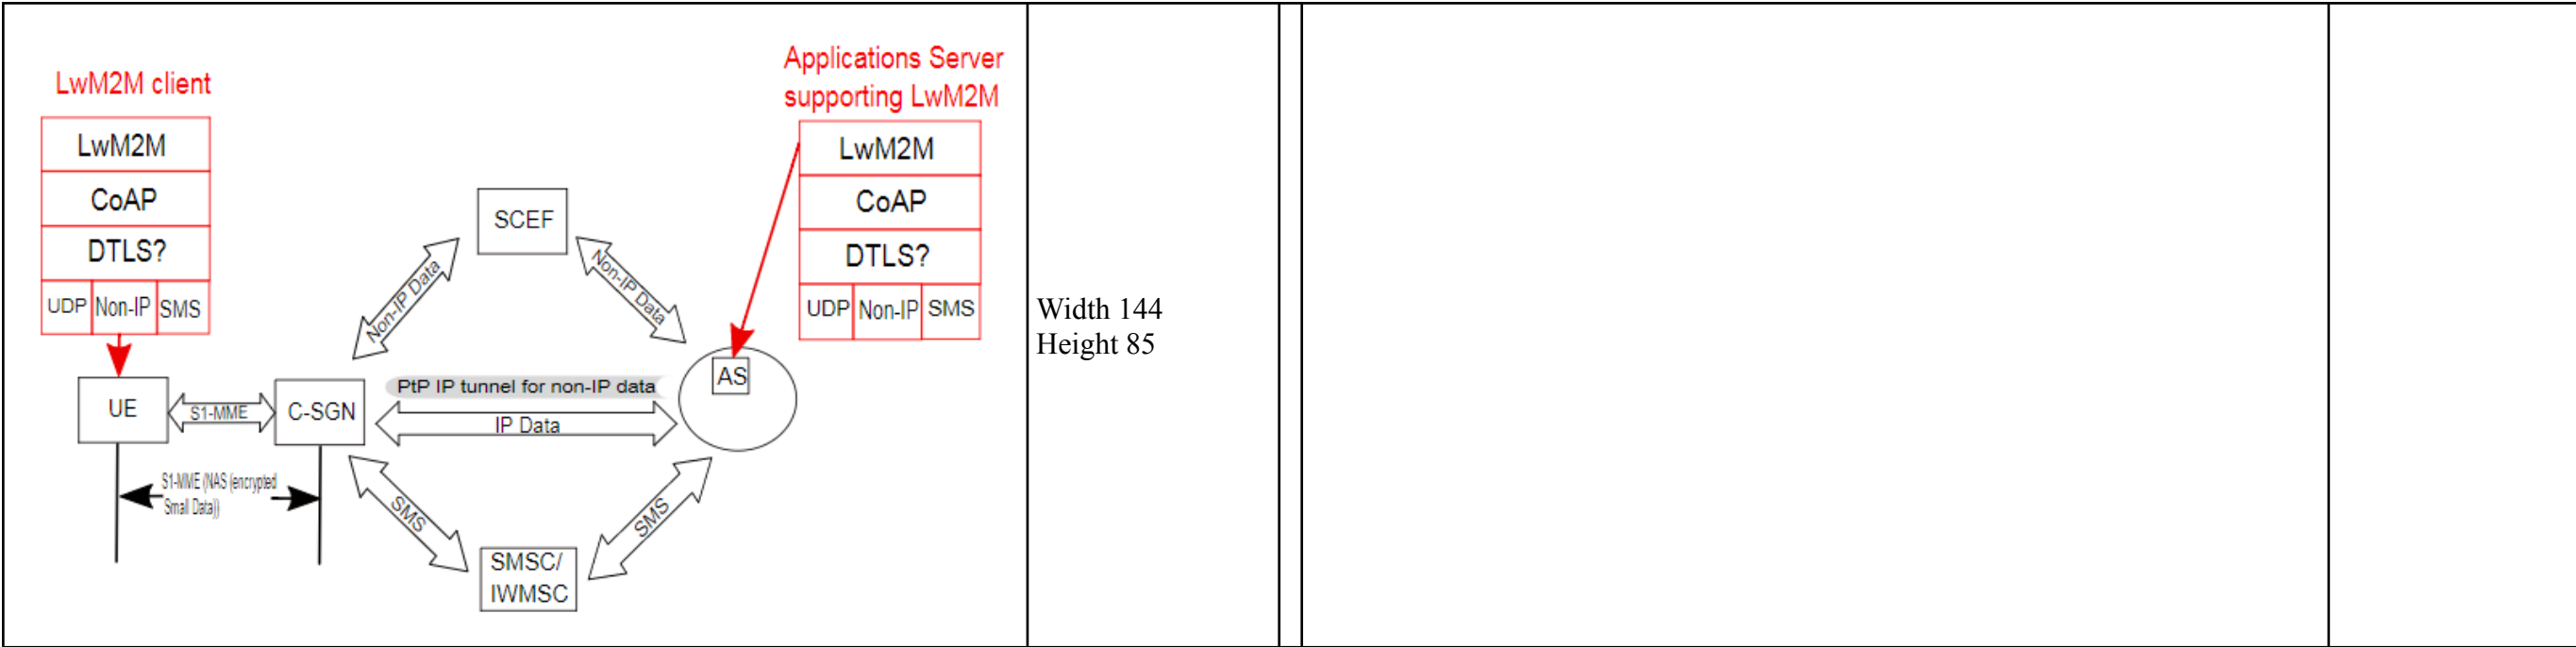

4. Create Image	See <a href="#">Image Dimensions</a> to view correct image sizes.		Note, each image varies so dimension size must correspond to the listed figures. If the image is not listed and you require assistance please contact <a href="mailto:helpdesk@omaorg.org">helpdesk@omaorg.org</a>
5. Adding text to Image	<p>Click 'A' icon on the side of the menu bar which will Create and edit text objects</p> <p>Double click on the image where you want the text box to be located. The option to select the font and size will appear Font family- Ariel Font Style - Normal Font Size - 12</p>		
6.Once Image has been completed	<p>Click File Select Document Properties Click 'Resize page or drawing or selection'.</p>		This will remove any excess space that surrounds the diagram
7.Save Image	<p>Click File Ensure the file name relates to the title of the image being uploaded to GitHub</p>		

IMAGE DIMENSIONS

Image snapshot Type	Image dimensions	Image snapshot Type	Image dimensions
---------------------	------------------	---------------------	------------------

ICON SELECTION

ICON Selection	Screenshot	Icon Selection	Screenshot
Resize shapes/Textbox		Resize shapes/Textbox	
Add a line between shapes		Select all objects	
Add text box		Undo the last action	
Add direction arrow to line  Right-click online Select 'Fill and Stroke' from the drop-down menu (New window appears) Click 'Stroke style' tab and in markers select the required arrow direction			

HTML Requirements

Document Constructors	Markdown	Markdown Look & Feel	HTML Look & Feel
Figures	<p>MUST be referenced using HTML</p> <p>Images need to be uploaded to the "images" folder. In a GitHub repository, each technical document should have its own "images" folder. The location of the figure is controlled by the <i>src</i> parameter See <a href="#">Creation of .svg Images</a> The code to insert inside of the document to represent an image follows:</p> <pre>&lt;figure&gt;   &lt;img src="images/image-name.svg" alt="figure-title"&gt;    &lt;figcaption&gt;Figure Title&lt;/figcaption&gt; &lt;/figure&gt;</pre> <p>Note: Depending on the line thickness in figures, upon the SVG scaling factor and the browser zoom setting some lines may not be displayed when viewed from GitHub.This can be mitigated by increasing the browser zoom setting. <a href="#">To view how to use Markdown &amp;HTML click here</a></p>		<p>Figure: 4.-1 The overall architecture of the LwM2M Enabler</p> <p>Figure: 4.-2 The protocol stack of the LwM2M Enabler</p>

DO'S AND DON'TS

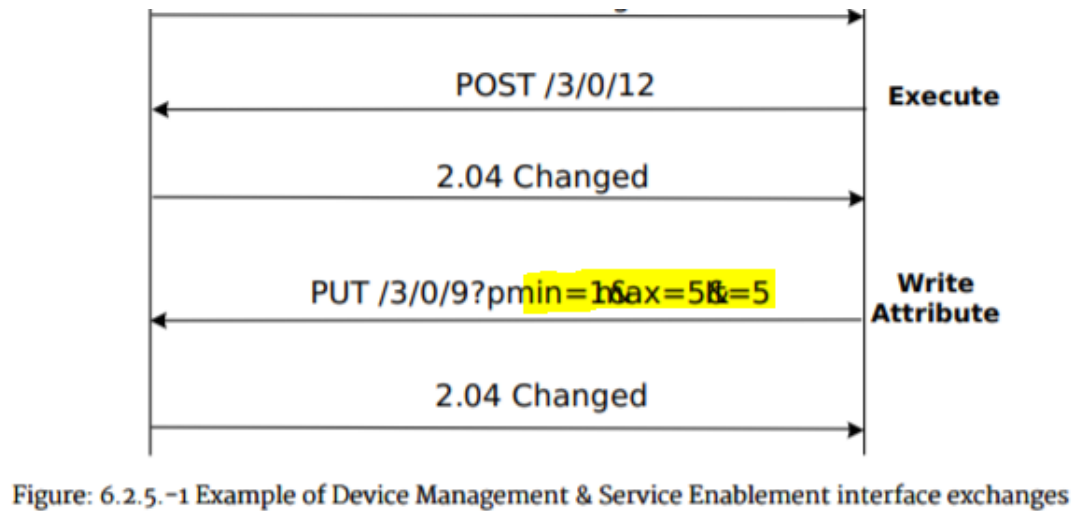

Do's
Use HTML constructor as listed here
Ensure contiguous text in a line is in a single text box and not multiple text boxes. If multiple text boxes are used then when the figures are converted to PDF the figures may appear incorrect.
Do ensure lines have a sufficient (non zero) width e.g. 0.4 mm (dependent on the figure scaling).
Don'ts
DON'T use markdown constructors to insert a figure
DON'T use parameters to centre or define the width and height of the figure
DON'T embed bitmaps in SVG figures

Click here for a full breakdown of [conversion Markdown to HTML/PDF](#)

FAQ - Problem Solutions

FAQ	Image of problem	Solution	Figure Images
-----	------------------	----------	---------------

How do I resolve overlapping/merging text in a figure when creating a PDF document?

The problem originates due to the text being broken down into different text boxes.

Open up the image in Inkscape ([Download software](#))

Identify overlapping/merging text in the figure Fig 1 highlights that in this example there are 3 text boxes.

3. Simply use the first text box to insert all the required text into a single text box. (Fig 2)

4. Delete the additional text boxes once all the information has been added and place the text box into the correct position. (Fig 3)  
5. Save the file and upload to the Correct GitHub repository.
